

Muhammad Nazimuddaula

UX Architecture · Design Systems · Robotics · Physical AI · Function Specification

Senior UX Architect with 15+ years working at the intersection of interaction design, systems thinking, and product strategy — currently focused on translating complex technical and robotic behavior into coherent user experience, in environments where the hard problems exist before any screen is drawn.

Comfortable moving between hands-on craft and cross-functional leadership, with a constant focus on making complex systems feel obvious to use. Quick to adopt new tools and processes as the craft shifts — currently applying that to AI-assisted design workflows.

EXPERIENCE

Senior UX Designer — NEURA Robotics, Metzingen, Germany

Oct 2024 — Present

Cognitive robotics has no established interaction language yet — most UX patterns are borrowed from screens, not built for physical, semi-autonomous machines.

Working closely with robotics engineers to define where an interface should defer to the robot's own behavior versus give the user explicit control, and translating that into high-fidelity interfaces and Neuraverse's user flows alongside internal and external teams. Also defining the design system at an organizational level, using AI-assisted prototyping tools to iterate on component logic faster than manual specs allow, and supporting other designers working within that system.

Product Director — KONA SL, Dhaka, Bangladesh

Feb 2024 — Sep 2024

Smart card fintech operates under real regulatory and technical constraints.

Aligned engineering and business stakeholders around a roadmap that balanced user needs with compliance. Also led user research with foreign workers in South Korea to establish a baseline for a planned cross-border financial product.

Head of Brand and Communication — Chaldal (YC S15), Dhaka, Bangladesh

Jan 2021 — Jan 2024

Coordinating a 5-part commercial series with an outside director and celebrity talent during a nationwide expansion meant managing many external stakeholders against a fixed timeline and budget.

Led that process end-to-end — different priorities, different approval chains — while keeping brand messaging consistent across every touchpoint.

Chief Product Officer — Maya Digital Health, Dhaka, Bangladesh

Dec 2019 — Dec 2020

(Company no longer active) Short tenure, but a concentrated one: led a full redesign of the main website and stood up the company's first iOS app development process from scratch. That work fed into the company's pitch for its next funding round, which closed shortly after.

Head of Product Design — Deligram, Dhaka, Bangladesh

Jul 2019 — Nov 2019

(Company no longer active) A brief stay — left before the role fully took shape — but pushed for one unified product experience across mobile and desktop, rather than the two being treated as separate design problems.

Co-Founder and CEO — G&R, Dhaka, Bangladesh

May 2010 — Jun 2019

There was no local playbook for digital advertising when this started.

Building it meant inventing process alongside product. Leading a 50-person team through nine years of that, in a market with no precedent to copy from, was as much about building the organization as building the product. G&R's work was featured by Google at Google I/O 2014.

EARLIER EXPERIENCE

- Co-Founder, Color Talking, Jan 2011 — Dec 2020
- Creative Consultant, Kormo by Google, Sep 2018 — Oct 2018
- Typographer, Amar Bornomala, Nov 2012 — Mar 2013
- Design Consultant, CARE Bangladesh, Apr 2007 — Dec 2009
- Logo Designer, GIZ Bangladesh
- Interaction Designer, eBizzSol, Sep 2005 — Mar 2010
- Graphic Designer, Bull's Eye Communication, Apr 2004 — Aug 2005
- 2D Animator, GlobeKids, Oct 2002 — Jun 2003

EDUCATION

BFA & MFA in Graphic Design
University of Dhaka, Bangladesh,
2001 – 2006

Thesis: Contemporary Bangla
Typography

SKILLS

Core: User Experience, Digital
Product, Brand & Communication,
Illustration, Typography, 2D
Animation

Software: Figma, Claude Design,
Adobe Photoshop, Adobe Illustrator,
Jira, Confluence

LANGUAGES

- Bangla: Native
- English: Fluent (current working language)
- German: A2/B1 (learning in progress)

PROJECTS

Neuraverse

NEURA Robotics, 2025

Designing for robotics simulation meant serving two different users at once — engineers programming exact behavior, and end users who just want something to happen. Designed the user flows and interfaces, working across internal and external teams to meet both needs.

Custom Bangla Font Design

Asiatic Talking Point, 2010

Bangla's script carries structural demands — conjuncts, matras, spacing — that most rebrand timelines don't account for. Designed a custom typeface for Robi within that constraint; it has remained their identity for over a decade.

Lekhok, the Bangla Keyboard

Color Talking, 2014

Designed a new Bangla key layout and built its Android and iOS apps. It didn't take off — a clear lesson in how much typing habits resist redesign, and still one of the projects I learned the most from.
